- Compact and durable design for easy pedalboard integration.
- Unique, artful design
- Dimensions: 14 x 10.2 x 6.4 cm
- Power requirement: 9V, 100 mA
- Designed and assembled in California, USA.

Description

The Larva is a 6-stage analog phaser with a built-in preamp and morphing capabilities.

It offers two phaser settings, letting you easily switch between different sounds or morph between them for unique transitions. Whether used as a classic phaser, a vibe pedal, or just a preamp (which sounds amazing on its own), the Larva delivers versatility and creative possibilities, always with the Beetronics unique signature.

The interface is intuitive and simple, yet the pedal can produce an insane amount of sounds and movements no other phaser has done. A bar of LEDs tracks the ramp movement, showing if you're in phase one or two, while the bypass LED doubles as a meter to monitor preamp distortion.

As our first phaser, the Larva brings together endless creative options with a streamlined, user-friendly design—modulation sweetness with a touch of honeyed gain.
